

Plast Motorboats

Motorboat Vector Si.

The Plast Group is one of the largest Russian manufacturers of fibreglass products. Since 1994 it has developed from a small workshop into a large factory producing over 100 products under 4 major division: vehicle spare parts and accessories; boats and motorboats; bath tubs and kitchen sinks; children playgrounds.

The 6.03-meter motorboat 'Vector Si' is intended for family leisure on rivers, lakes and also in the coastal zone of seas.

WHY?

Recently new challenging foreign-made GRP material Parabeam® with thickness varying from 3 to 22 mm has come into manufacture of fibreglass products in Russia. They are successfully used in the marine range of products, where units' weight along with a fair thickness is as important as the strength and rigidity of the construction.

Fibreglass-made boats enjoy numerous substantial advantages over boats made from other materials. Fibreglass is resistant to high humidity, temperature ups and downs, and corrosion which makes it possible to avoid yearly repair and colouring even during the storage on the shore. Fibreglass is considerably lighter in weight than wood or metal which solves many problems related to transporting and storage and gives more design freedom.

Applications	Technical data	Remarks/ Comments
<ul style="list-style-type: none"> - Rooftop - Cabintop - Enginecover - Back- and middle deck 	Coating: Main colour gelcoat Core: ParaGlass/10 Skins: Chopped strand 2 mm Resin: Polyester resin	Plast states: "Our construction workers are very impressed with the material because it is especially convenient to use it on the roof of the cabins since it is not a plain surface and Parabeam® is flexible. "
